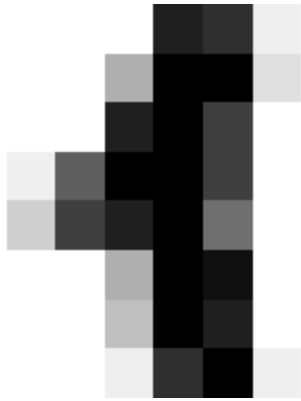
Same report, different best margin interventions

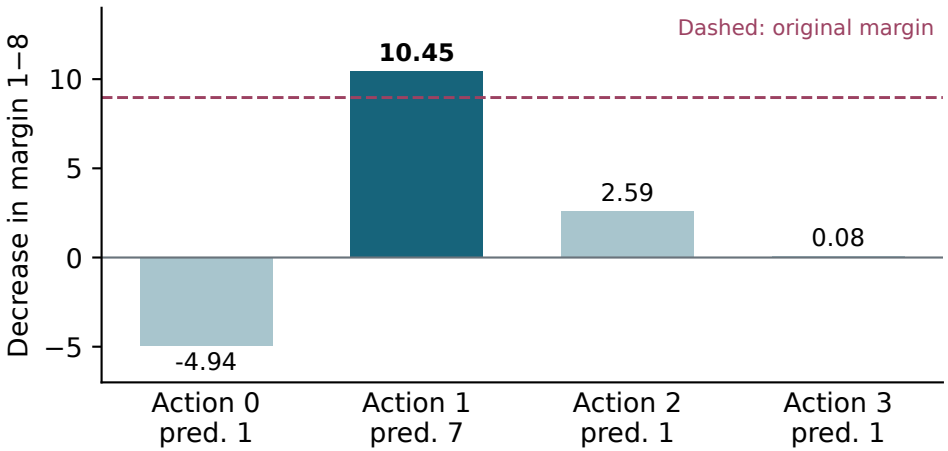
Nonlinear downstream readout, seed 143 · 75% attenuation of a fixed eight-unit group

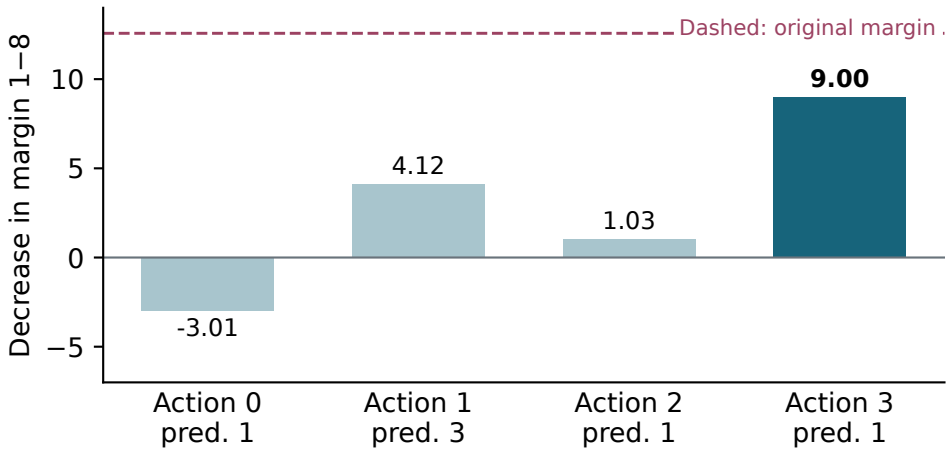
Identical state code: 11011010 | Predicted class: 1 | Runner-up: 8

Image 1120 · labelled 1
Original margin 1−8: 8.968

Image 11 · labelled 1
Original margin 1−8: 12.571







Exact finite-pair certificate: every common deterministic action has worst-case margin-regret ≥ 4.872248.

The objective is the fixed 1−8 margin. Action 1 changes both full predictions via other classes (7 and 3).
This pair therefore certifies margin regret, not different necessary class-flip actions.

Descriptive natural-image pair from a reused test split; not a population estimate. Groups and strength are fixed. No semantic neuron labels are claimed.
