Same report, different best margin interventions

Linear downstream readout, seed 43 · 75% attenuation of a fixed eight-unit group

Identical state code: 11001110 | Predicted class: 8 | Runner-up: 1

Image 1305 · labelled 8
Original margin 8−1: 5.177

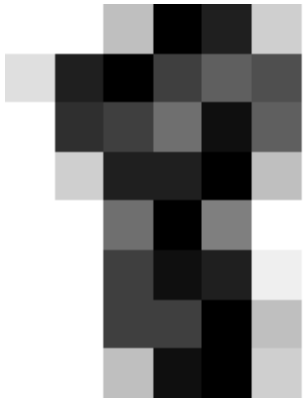

Image 253 · labelled 8
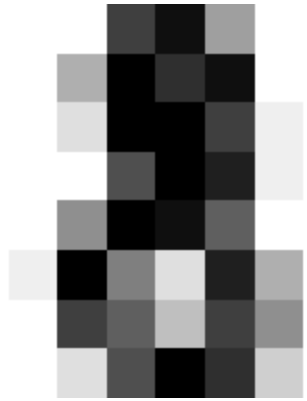
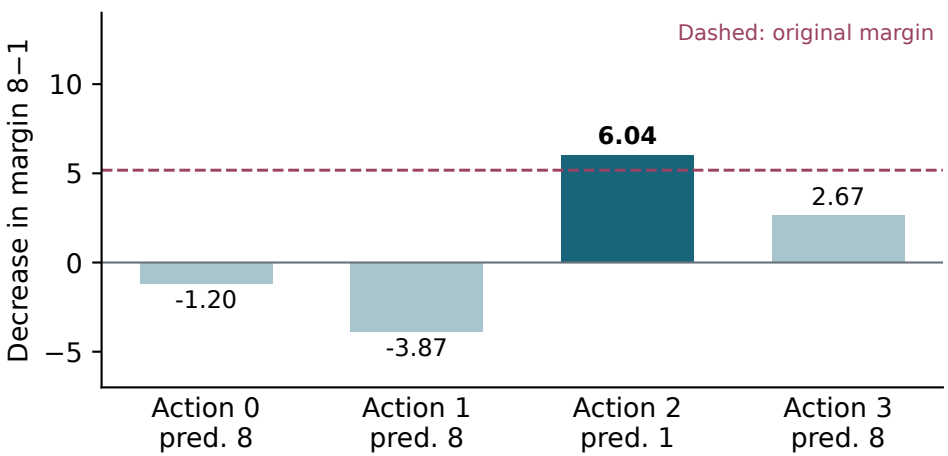
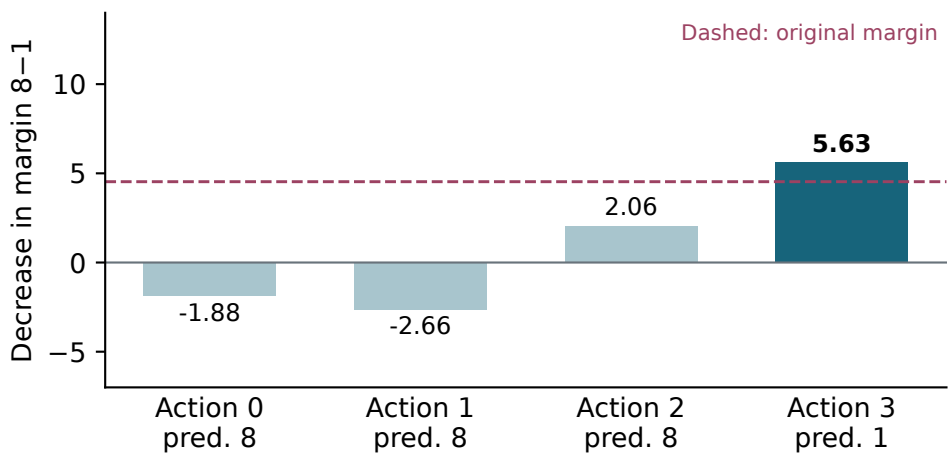
Original margin 8−1: 4.531







Exact finite-pair certificate: every common deterministic action has worst-case margin-regret ≥ 3.375588.

Only action 2 flips the first image from 8 to 1; only action 3 flips the second.
A policy using only the identical report and class-pair context cannot choose differently for the two inputs.

Descriptive natural-image pair from a reused test split; not a population estimate. Groups and strength are fixed. No semantic neuron labels are claimed.
